General Information

Cotoran is a systemic preemergence and postemergence herbicide for selective contact and residual control of weeds. Cotoran is effective for both annual grass and annual broadleaf weed control. When applied postemergence, susceptible weeds absorb Cotoran through both foliar contact and soil absorption. Foliage of treated weeds cease growth after application and usually turn brown. Death of weeds may take up to two weeks.

Application Information

Postemergence Application – Apply Cotoran postemergence to wildflowers at 1.0 qt/acre (1.0 lb ai/acre). A crop oil concentrate (COC) at 1 pint per acre is recommended to improve control.

Wildflower species shown to have acceptable tolerance to Cotoran postemergence application include *Cosmos bipinnatus* spp.

Wildflower species with unacceptable tolerance to Cotoran postemergence application include Baby Blue Eyes, Bachelor's Button, Bird's Eye, Black-eyed Susan, California Poppy, Catchfly, Clasping Coneflower, Corn Poppy, Dame's rocket, Gloriosa Daisy, Indian Blanket, Lance-leaved Coreopsis, Mountain Garland, Ox-eye Daisy, Pains Coreopsis, Purple Coneflower, Rocket Larkspur, Shasta Daisy, Sulphur Cosmos, Sweet William, Toadflax, and Wallflower.

Cotoran may be applied as a postemergence application to other tolerant wildflower species that are supported by research at North Carolina State University.
