

Rock-Lined Outlet

Definition/Purpose

A Rock-lined Outlet means a waterway having an erosion-resistant lining of concrete, stone or other permanent material where an unlined or grassed waterway would be inadequate to improve water quality. Benefits may include safe disposal of runoff, reduced erosion and sedimentation. (DIP)

Policies

1. Structural geotextiles shall meet the requirements of "Construction Specification 217 - Geotextiles". Drainage geotextiles shall meet the requirements of N.C. Technical Guide, Section IV Practice Standard 606, as shown in paragraph 606-8-5.

ROCK-LINED OUTLET	
Maintenance Period	10 YEARS
